DETAILED ACTION

EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

The application has been amended as follows:

Page 1 of the specification, after "DATA TRANSMISSION/RECEPTION SYSTEM" add

-- This application is a 371 of PCT/JP03/10884 filed on August 27, 2003.--

Allowable Subject Matter

1. Claims 1-8 are allowed.
2. The following is an examiner's statement of reasons for allowance: with respect to claim 1, in addition to other limitations in the claim, the prior art fails to teach, disclose or render obvious the applicant's invention as claimed, particularly the feature describing a feedback circuit for determining a high level voltage and a low level voltage of the clock signal transfer path to generate at least one control signal which is to be supplied to the clock driver circuit such that a high level voltage of the clock signal which is transmitted to the clock signal transfer path is equal to a first reference voltage which is lower than a voltage of the first power supply, and a low level voltage of the clock signal which is transmitted to the clock signal transfer path is equal to a second

reference voltage which is higher than a voltage of the second power supply, and the data signal which is to be transmitted to the data signal transfer path based on a control signal generated by the feedback circuit.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Saito (6,452,421) discloses clock driver, clock receiver, data drivers and data receivers which are synchronized with the clock signal, but no feedback circuit, no first reference voltage which is lower than a voltage of the first power supply, and no second reference voltage which is higher than a voltage of the second power supply.

Segaram (6,775,328) discloses differential clock driver, differential clock receiver, differential data drivers, differential data receivers and a feedback loop for synchronizing the communication system, but no first reference voltage which is lower than a voltage of the first power supply, and no second reference voltage which is higher than a voltage of the second power supply which is detected by the feedback circuit.
